

Job Description (Ref: 1377)

Mechanical Design Drafter (Inventor)

Contract

£26 - £28 ph Ltd

Buckinghamshire

Our customer has a long and proud history of supplying innovative design solutions for the process industries. They are nearing the end of a project for a new machine and require a Mechanical Design Drafter with Inventor experience to ensure the project is completed on time.

Recent experience of Inventor is essential and previous high speed, special purpose machinery experience would be ideal, although Mechanical Design Drafters from other engineering disciplines will be considered.

The role will also include assisting with hard user manuals and touch screen display manuals, therefore a Mechanical Design Drafter with previous experience of exporting drawings into word and other software packages for this purpose would be of particular interest.

The Mechanical Design Drafter is required for an initial 3 months, however our customer has further projects due in and it is highly likely the successful candidate will transfer to these, once the initial project is finished.
